TASK 1 REPORT

Internship Program — Batch 2026

Submitted By:	Khushbakht Mehboob (ID: Mtech-AI26034)
Department:	AI / ML
Submitted To:	Mr. Mohazin Zahid

1. Introduction

This report presents the work completed for the SMS Fraud Detector project during the M-Tech Production & Marketing AI/ML Internship Program. The project was developed to detect spam and fraudulent SMS messages using Machine Learning and provide users with useful analysis.

2. Objectives

- Build an SMS fraud detection desktop application.
- Learn the use of Machine Learning for text classification.
- Create a user-friendly interface.
- Store and analyze prediction history.

3. Task Description

The task was to develop an application that checks SMS messages and predicts whether they are Spam or Legitimate. The application also shows prediction confidence, keeps history, and displays analytics.

4. Work Done

- Designed the desktop application using Tkinter.
- Trained a Machine Learning model using TF-IDF and Naive Bayes.
- Connected the application with SQLite database.
- Added dashboard, analytics, reports, and prediction history.
-

5. Challenges Faced

- Designing a clean user interface.
- Connecting the ML model with the GUI.
- Managing database records correctly.

6. Key Learnings

- Machine Learning text classification.
- Tkinter desktop application development.
- SQLite database integration.
- Basic data visualization using charts.

7. Conclusion

The project was completed successfully. It improved my understanding of Machine Learning, desktop application development, and database management.
